Jeffrey Rengifo

Software and Elastic Stack engineer

Medellín, Colombia · jeffrey.rengifom@gmail.com · jeffrm.com · linkedin.com/in/jeffrey-rerin · github.com/Delacrobix

I work on search, observability and AI agents. I write technical articles for Elastic's official blogs, record video tutorials and work on Elasticsearch projects for clients.

Experience

Elastic Stack engineer and technical writer Sep 2024 to present
Kibernum, Elite Consulting Team. Contractor.

- 61 technical articles with code on Elastic's official blogs: 40 on Search Labs since January 2025 and 21 on Observability Labs since April 2026.
- 8 video tutorials on Elasticsearch and LLM applications.
- More than 45 pull requests merged into Elastic's example repositories.
- Elasticsearch consulting projects for US clients.

Freelance web developer 2022 to 2024
Several clients.
Web applications, Chrome extensions, desktop applications, scraping systems, APIs and solutions with Elasticsearch and Kibana.

Projects

Reference and SEO articles Oct 2026 to present
Elastic.
“What is...?” articles and rewrites of pages on Elastic's site about observability, vector search and AI, written from SEO briefs and reviewed with their editorial team.

App Search to Elasticsearch 9 migration Jun 2026 to present
US health research center.
Elasticsearch 9 cluster set up from scratch, with Open Web Crawler. Ingest pipelines that reproduce the previous system's output. TypeScript proxy with Search UI, lifecycle policies (ILM) and search analytics on OpenTelemetry.

Painless documentation rewrite 2025
Elastic.
Took part in rewriting the documentation for Painless, Elasticsearch's scripting language: tutorials, syntax and troubleshooting pages.

Swiftype to Elasticsearch migration Nov 2024
US insurance brokerage.
Migration advisory, with prototypes of a .NET proxy, Search UI and connector mappings.

Own products

Vatio. Energy web app for Colombian households. FastAPI and React, with automated tests on every deploy.

Dark Score. Converts sheet music to dark mode in the browser, without uploading files. darkscore.app

Published work

61 published articles: 40 on Search Labs and 21 on Observability Labs.

+52,000 views on elastic.co.

No. 1 by articles published on Search Labs.

8 video tutorials.

Areas of work

AI agents and LLM applications. RAG, MCP, LangChain, LangGraph and LLM evaluation.

Search and observability with Elastic. Elasticsearch, ES|QL, Elastic Observability, OpenTelemetry and search migrations.

Development. Python, FastAPI and TypeScript, with React for interfaces.

Certifications

Elastic Certified Observability Engineer. Elastic. February 2026, valid until February 2028.

Elastic Certified Engineer. Elastic. January 2025, valid until January 2027.

Courses. Elastic Observability Engineer (On-Demand) (Elastic, December 2025); Introduction to Painless (Elastic, July 2025); Elasticsearch para todos (Udemy, October 2023).

Awards

2nd place, Enterprise AI Hackathon. New York Stock Exchange (NYSE) and Cohere. March 2024. Team Kibernum. RAGenda, an AI meeting assistant built on Cohere's connectors: it prepares agendas, runs a live chat and writes reports afterwards.
